

e-log...the smart way to build

easy to install:

- No special tools or training needed
- Able to install over most surfaces
- Easily handled by one person
- Less maintenance

e-logs install like conventional tongue and groove siding over standard wood or metal studs, Structural Insulated Panels (SIPs), or concrete block walls.

Nearly anyone with basic building knowledge/experience and tools can readily install the e-log siding system. At the heart of the e-log is it's foam core. With it comes a lightweight, durable and extremely stable log siding. It will not shrink, twist or warp, making installation more efficient.

The maintenance of the e-log siding system can be as simple as keeping the siding washed and stained, which is the least amount of maintenance for any log siding on the market.
