

e-log...the smart way to build

environmentally friendly:

- Green Product
- Gain LEED points
- Biobased products
- No VOCs
- Recycled content

The e-log is considered an Environmentally Preferable Product (EPP) and may enable the homeowner to gain LEED points on the building project.

The e-log contributes to the Energy Star rating, reduces construction site waste and conserves natural resources, due to the fact that one 12" diameter log 8' long, is equivalent to producing 60 e-logs. The products that make up the e-log are local to the factory, emit no VOCs, contain recycled content, increase the R-value and are non-toxic, therefore have no ozone depleting substances.
